Result interpretation

Passed results are green, failed results are red, and skipped results are orange. The five Contact Us WCAG failures are Axe rule aria-valid-attr-value: branch-tab aria-controls values contain branch names with spaces and are invalid ID references. This can prevent assistive technologies from associating a tab with its map panel; it does not mean the page cannot be opened or used in Safari. Page availability, form operation, navigation, map selection, visual rendering, and keyboard operation passed separately in all five profiles. Browser or network execution errors, if recorded in a future run, must be distinguished from reproducible product defects during developer triage.
