SBB Oxygen House - Correct Browser Testing and Bug Reporting

Developer and QA handoff guide - 15 August 2026 (Sri Lanka time)

Decision

Manual testing passed	Do not send the current automated failures as confirmed production bugs. Record them as findings that require verification.
Browser naming	Only use Chrome, Safari, Edge and Firefox in developer-facing reports, and state whether the result came from Web or Mobile testing.
Evidence standard	A browser result is reportable only when that named browser or device was actually tested. Never substitute another browser result under a different browser name.

Approved browser matrix

Browser	Platform	Required test environment	Developer-facing label
Chrome	**Web**	Actual Google Chrome on desktop	Report as Chrome Web
Chrome	**Mobile**	Real Android Chrome is preferred; otherwise label the result as mobile emulation	Report as Chrome Mobile
Edge	**Web**	Actual Microsoft Edge on desktop	Report as Edge Web
Edge	**Mobile**	Real Microsoft Edge on Android/iOS or a real-device service	Report as Edge Mobile
Firefox	**Web**	Actual Mozilla Firefox on desktop	Report as Firefox Web
Firefox	**Mobile**	Real Firefox on Android or a real-device service	Report as Firefox Mobile
Safari	**Web**	Actual Safari on macOS	Report as Safari Web
Safari	**Mobile**	Actual Safari on iPhone or iPad	Report as Safari Mobile

Correct result classifications

Classification	Meaning
Confirmed Bug	The problem is reproduced manually in the named browser and supported by repeatable evidence.
Manual Test Passed	The manual scenario works. An earlier automated failure must not be presented as a confirmed product defect.
Automation Issue	The failure is caused by timing, selectors, emulation, test data or the automated check itself.
Needs Verification	The result has not yet been reproduced manually in the required real browser or device.
Accessibility Finding	Markup or assistive-technology behavior requires accessibility review; ordinary visual access may still work.
Performance Observation	A timing budget was exceeded, but functional behavior may still be correct.

How to handle the current findings

Finding group	Current status	Required action
Home navigation, images and CTA findings	**Manual Test Passed / Needs Verification**	Repeat in the actual named Chrome, Safari, Edge and Firefox environment before raising a developer bug.
Shop sorting and filtering findings	**Manual Test Passed / Needs Verification**	Repeat each control in the actual named browser and capture a screen recording only if it fails again.
Services and About Us keyboard findings	**Needs Verification**	Verify using a physical keyboard on desktop browsers and accessibility testing on the required devices.
About Us timing finding	**Performance Observation**	Retest several times on a controlled network and report median timing, not one slow run.
Contact Us branch-tab ARIA finding	**Accessibility Finding**	Keep for developer accessibility review. It does not mean Safari or another browser cannot open the page.

Developer handoff rule

Send only Confirmed Bugs as product defects. Keep Manual Test Passed, Automation Issue, Needs Verification, Accessibility Finding and Performance Observation in a separate QA findings register until the required verification is complete.
